

INTELLIGENT VIDEO SOLUTIONS

Equitable meeting experiences for everyone. Everywhere.

The more remote participants see, the more they feel a part of the team. The more automated the system, the more worry free it is for in-room participants. Crestron Intelligent Video helps you deliver the same consistent, dynamic experience for everyone — in-room or remote. And when everyone can engage more naturally, communication and collaboration happen more easily.

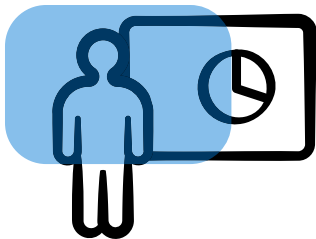

From small rooms to multi-purpose rooms, from lecture halls to town halls, Crestron Intelligent Video brings everyone closer together in any type of meeting, any size room, and every kind of situation.

True automation makes a real difference.

A.I.-driven software and hardware provide seamless automation that frees in-room participants to engage fully in the meeting without worrying about the meeting technology.

Dynamic video that engages and includes.

Intelligent video keeps everyone in the picture — taking you beyond what's said, capturing the facial expressions and body language that speaks volumes.

Presenter Tracking

Smoothly follows a presenter as they walk, allowing them to move naturally, while also providing a close-up view for remote participants.

Group Framing

Automatically adjusts the camera to pan, tilt, and zoom so everyone in the room is perfectly framed.

Speaker Tracking

Intuitively shows who's speaking and follows the conversation, switching focus as the speaker changes.

Dynamic Composition

Shows more than one view of the meeting space to add context and provide an immersive experience.

A solution for every space.

Video conferencing is needed in a wider array of spaces, applications, and use cases than ever before. Each instance has its own needs and focus points. Crestron Intelligent Video has you — and every space — covered with the widest portfolio of solutions available.
