

Digitalmedia 8G+® Transmitter 401

The Crestron® [DM-TX-401-C](#) provides a versatile interface for computers and high-definition AV sources.

Install the Transmitter

The DM-TX-401-C can be mounted into a rack, attached to the underside of a table, or placed onto a flat surface. To mount the device into a rack, use the ST-RMK Rack Mount Kit (sold separately). To attach the device to the underside of a table, use the [UTK-1U-HALF](#) Under-Table Mounting Kit (sold separately).

In the Box

- 1 DM-TX-401-C, DigitalMedia 8G+ Transmitter 401

Additional Items

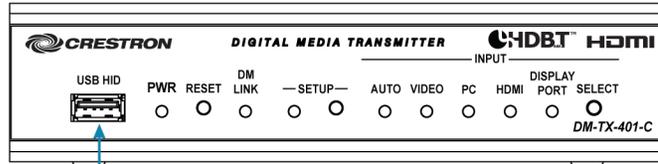

- 1 Connector, 2-pin (2003574)
- 1 Connector, 5-pin (2003577)

Digitalmedia 8G+® Transmitter 401

Connect the Transmitter

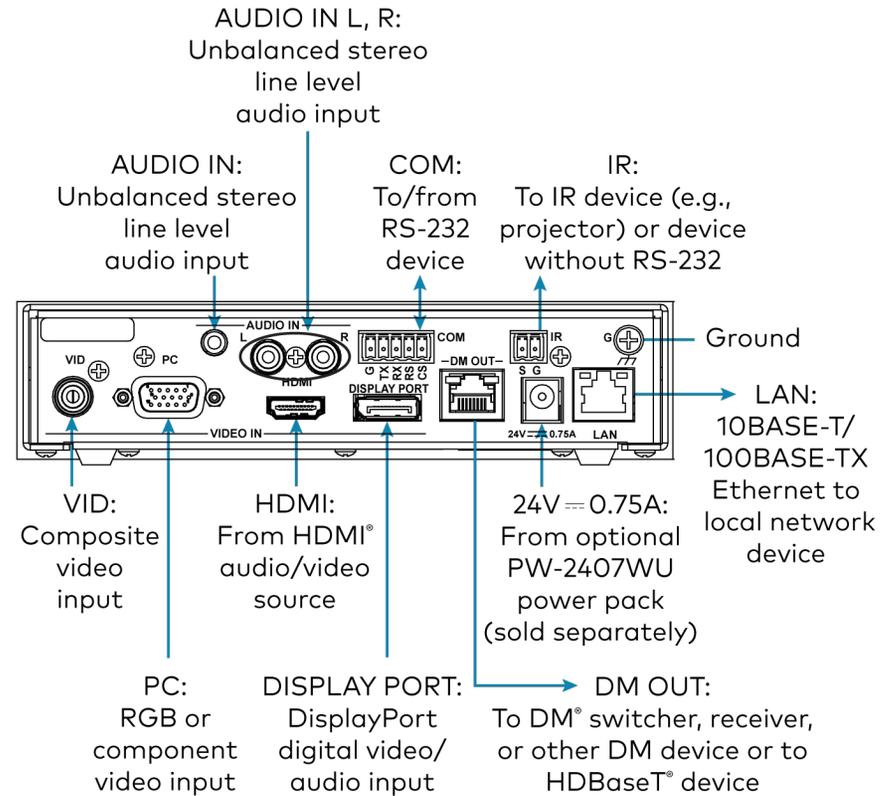

Connect the transmitter as appropriate for the application.

Front Panel Connection

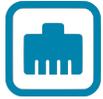

From mouse/keyboard
or
TT-100 series device

Rear Panel Connections

NOTE: The DM OUT port is a PoDM (Power of DM) or HDBaseT® PoE (Power over Ethernet) PD (Powered Device) port. To receive PoDM or HDBaseT PoE, the DM-TX-401-C requires a connection to a DM® switcher or other equipment that has a PoDM or HDBaseT PoE PSE (Power Sourcing Equipment) port. Any wiring connected to a PoDM or HDBaseT PoE PSE port is for intrabuilding use only and should not be connected to a line that runs outside of the building in which the PSE is located.

Digitalmedia 8G+® Transmitter 401

Determine the IP Address

The configuration of the DM-TX-401-C within a DM 8G+® system determines how the IP address of the DM-TX-401-C is set:

- If the DM-TX-401-C is connected to a DM switcher, the IP address is configured by the switcher automatically.
- If the DM-TX-401-C is connected directly to a DM 8G+ receiver (commonly referred to as a standalone configuration in which no DigitalMedia switcher is used), the IP address of the transmitter is assigned using DHCP (Dynamic Host Configuration Protocol) by default. If you wish to assign a static IP address, do either of the following:
 - To assign the default static IP address of the transmitter, hold down the **SETUP** button while the unit boots up. The default static IP address 192.168.1.234 overwrites the current setting.
 - To manually set a static IP address other than the default address, use the Crestron Toolbox™ application.

Select an Input

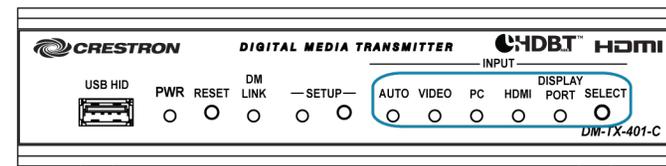

By default, automatic switching of inputs is enabled. Automatic switching causes inputs to switch according to the following priorities:

- **Video switching priority:** DisplayPort™, HDMI, RGB, composite
- **Audio switching priority:** DisplayPort, HDMI, 1/8 in. analog, dual RCA analog

The AUTO LED on the front panel of the DM-TX-401-C lights to indicate that automatic switching is enabled.

To manually select the desired audio/video input, press the **SELECT** button on the front panel of the DM-TX-401-C until the corresponding LED lights.

Input Selection LEDs and Button

Pressing the **SELECT** button in succession changes the input selection from automatic switching (the default setting) to the various available selections in the following order:

- **DisplayPort audio and video:** The DISPLAY PORT LED lights.
- **HDMI audio and video:** The HDMI LED lights.
- **VGA video with 1/8 in. audio:** The PC LED lights.
- **Composite video with dual RCA audio:** The VIDEO LED lights.
- **None:** No input is selected.

After cycling through the selections above, pressing the **SELECT** button returns the DM-TX-401-C to automatic switching.
