CSS-ARCH-MANUAL-SLIM

Architectural Slim Manual Shades

Versatile, chain-operated shade with a slim hardware design

Ideal for mounting between window jambs or inside smaller pockets

Decorative curved or square fascia and optional top back cover

End caps come in a variety of finishes

NOTE: "CSS-ARCH-MANUAL-SLIM" is sold as part of a custom-configured product and orders are placed via the Crestron® Design Tool for Crestron Shading Solutions. This specifications page is for informational purposes and shows the available parts of an Architectural Slim Manual Shade. To configure shades or order shading parts and accessories, please use the Crestron Design Tool for Crestron Shading Solutions or call 1-855-53-S-H-A-D-E (537-4233) for support.

Architectural Slim Manual Shades from Crestron® are suitable for wall and ceiling mounting, but are ideal for installing between window jambs or inside smaller pockets because of their compact mounting brackets and hardware. Available extrusions include square or curved fascia, with an optional top back cover. In addition, matching end caps come with the order of a fascia.

Slim Brackets
The shade assembly is mounted using the supplied pair of Slim mounting brackets. One bracket is designed for the idler end of the shade assembly and one for the clutch end. For easy drilling and mounting, the brackets have slotted sides.

Fascia & Top Back Cover
Fascia can be square or curved and is tensioned fit to snap onto the slim brackets. It both camouflages the roller shade and allows access for adjustment and maintenance. A top back cover is available with fascia as part of a two-piece assembly and is suitable for surface mounting to a header, jamb, or wall. End caps are curved or square to match fascia design.

Chain & Chain Tension Device
The chain that operates the shade comes standard in a stainless steel finish. A chain tension device (or "chain guide") ensures the chain is kept in place and does not interfere with shade operation. It secures to the wall, window frame, or floor to remove slack from the chain. Setting upper and lower limits of the shade is done with stop balls, which are installed onto the chain.

Crestron Shading Solutions Safety Information
Crestron's manual shades are sold with a chain tension device connected to the shade's looped operating chain. If the chain tension device is not attached to the wall or floor, the shade will not function properly.

A chain tension device reduces the risk of a young child becoming entangled in the operating chain. This device should be used with all looped operating chains on window shades in any environment in which children are or may be present.

Crestron is committed to providing customers with products of the highest quality and workmanship. Safety is important to us, and we are proud to say that safety issues are rare. We will continue to work with organizations such as the Window Covering Safety Council to identify areas where products can benefit from enhanced safety features.
