# Crestron Studio® for residential

Experience the true potential of residential projects with the updated Crestron Studio®

Complete with new features and system improvements, it has never been simpler to create intuitive touch screen interfaces, add components and create custom living solutions – without having to write a single line of code.

Even better, the integration between Pyng® and Studio is native. All you need to do is tell Studio that there's a Pyng system on the network and Studio will build all touch screen interfaces and integration points automatically.

New and improved features for Crestron Studio®

Pyng integration
Crestron Studio® is fully compatible with Pyng, offering an intuitive, ultra-reliable Crestron experience, perfectly tailored to customers' needs. Functionalities such as Pyng Smart Graphics applications and Pyng Trigger/Listens can be added to your Studio® projects, giving your customer the lifestyle they demand, at their command.

Enhanced remote programming
Remotes that work so seamlessly, they virtually function by themselves. Think; every button already programmed, for every residential feature. And if you require customized solutions, the default programming is easily modified, giving your customer the ultimate in tailored automation technology.

CRESTRON®

Where technology starts

Sonos

It has never been easier to integrate Sonos into the home. With just one click, Crestron Studio® can automatically build pages and connect all programming. A perfectly integrated whole-home audio system at the touch of a button.
UI refresh

It's become easier to deliver a cohesive, reliable and innovative Crestron experience. Our all-new user interfaces and TV presets makes it both quick and straight-forward for programmers to improve user experience.

Classic features of Crestron Studio®

Source routes diagrams

With Crestron Studio®, you can connect your AV sources visually, allowing the software to build all of your touch screens and remotes automatically Source Route diagrams can then be saved as images and included in system documentation, making it easy to wire the AV connections in the rack. Fully customizable, this software offers unlimited possibilities in terms of bespoke home automation.

Touch screen linking

By connecting all touch screens within the property, with one customization you can have a fully automated home at your fingertips, quickly. Easily add additional touch screens or propagate changes out to many touch screens all without the possibility of errors through copy and paste. Simply change or enhance one touch screen and get the improvement on all those linked without additional manual steps.

Pre-built distribution pages

Audio Distribution and DM Video Distribution pages and functionality, built and ready for you. Adds volume and TV controls, source selection and 'Share Source' features for audio and video sources with ease, and deliver a dynamic, intuitive and consistent user experience.
