The DMC-CATO-HD is an output card designed for use with any card-based Crestron® DigitalMedia™ Switcher. It provides two independent DM® CAT outputs, plus one HDMI® output. The HDMI output carries the same signal as the first DM CAT output. Each DM CAT output enables connection to a DM CAT Receiver, a V-Panel™ touch screen display, or the input of another DM switcher, using [DigitalMedia cable](#).<sup>[1]</sup>

All outputs on the DMC-CATO-HD are capable of handling video resolutions up to Full HD 1080p, as well as computer resolutions up to WUXGA. DM CAT transports uncompressed high-definition video and computer signals over distances of 50 to 450 feet (15 to 137 m) using Crestron [DigitalMedia Cable](#) and up to two [DigitalMedia CAT Repeaters](#).<sup>[1]</sup>

Receivers connected to the DMC-CATO-HD are powered via DMNet® power, which is furnished by the DM switcher over the DMNet cable contained within the DigitalMedia cable. Each DMNet cable connects to a DMNet port located on the switcher's rear panel.<sup>[2]</sup>

To configure a DM switcher complete with input and output cards, cables, and other peripherals, please use the online [DigitalMedia Switcher Configuration Tool](#).

Are you upgrading an existing DM switcher that has older “multi-gang” DMC0-series output cards? Use the online [Output Card Additions and Upgrades Tool](#) to update your existing output cards and switcher to the new “single-gang” output card format.

Please refer to the [DigitalMedia Resources Webpage at <http://www.crestron.com/dmresources/>](#) for additional design tools and reference documents.
