

Wildwood Barnes London

Corporate | **Residential** | Education | Government | Hospitality | Transportation | Health Care | Cultural and Event Centers | Commercial Lighting

A converted Victorian villa in a smart southwest London suburb is no ordinary property, thanks to the efforts of developer Nick Bryant of Brybuild Ltd; architect Graham Massey of Creativemass, and custom installer and CEDIA member, D&T Electronics. The house is a stunningly conceived and expertly executed state-of-the-art family home that boasts enough Crestron home automation technology to make it truly worthy of its place on exclusive Castelnaud, one of the most expensive addresses in Barnes.

The Crestron system allows seamless control of the entire home automation demonstrating Crestron's extensive capabilities.

This beautiful home is made up of seven bedrooms, six bathrooms, five reception rooms, an indoor swimming pool, a games room, a cinema and a large garden with views across London and of the nearby Wetlands Centre; but it's the hi-tech specification and Crestron management system that sets this property apart.

The Crestron system allows seamless control of the entire home automation system, from operation of the 2m, wide-screen home cinema system to multi-room AV, programmed lighting and electronic blinds, interior and exterior CCTV, and door entry sub-systems.

This project demonstrates the extensive capabilities of Crestron technology solutions. Another highlight of this stunning property is the 40-ft long, glass-walled pool with a sophisticated biometric thumbprint door entry system that restricts children from accessing the area unsupervised.

With its traditional curb appeal and modern, hi-tech specification, this property is truly stunning both inside and out. Developer Bryant recognized that among the many factors that go into high end luxury property development, Crestron home automation is the finishing touch.
